Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/13/03 has been entered.
2. Receipt of an English translation of the priority document and priority of the application is acknowledged.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Neal et al.

Neal (Figures 1-7B) shows a method and a structure for connecting one device to another device. The method and the structure comprise a first device having an opening in the substrate 804 and a plurality of conductors on the substrate which are

Art Unit: 2839

folded into the opening to form a plurality of terminals 805 which engage a plurality of terminals 803 formed on the second device.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-4 and 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baur et al. in view of Neal et al.

Baur (Figures 1-5) shows a method and a structure for connecting one device to another device. The method and the structure comprise a first device (consisting of a base plate 3 and a substrate 2) with an opening 24 to be connected to a second device. Conductors 21 are arranged on the substrate and folded into the opening to form a first terminal, which engages a second terminal 11 on the second device when the two devices are fitted together. The method and the structure are used for ignition system in an automobile having a cylinder head and an ignition coil. The method and structure also include a positioning device 12, which is inserted into a socket 32. The rim of the base plate 3 is made of a softer material to provide a seal between the two devices. But Baur does not show a plurality of terminals in the opening in the first device engaging a plurality of terminals on the device. Neal shows such a feature as described in Paragraph 4 above. It would have been obvious to one having ordinary skill in the art at

Art Unit: 2839

the time of the instant invention to provide such a feature to the Baur's devices because this would provide a plurality of connections as shown by Neal.

Response to Arguments

7. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection. Neal shows a plurality of terminals in the opening of the first device engaging a plurality of terminals on the second device.
